# ISOPEDOTIS (SERIES B)
## Leveling System

KALLOS ISOPEDOTIS
Is a tile Isopedotis leveling system with screws, used in the installation of artifi cial and natural tiles and ensures that the materials are paved more evenly. The system includes leveling wedge with screws tls-Sw and holder joint tls-Ss

tls-S Series

## tls-Sw

» The design of the wedge with screws provides application via hand, not requiring any high force.
» It can be used at the sides and corners of the coating material.
» Through the holes on the wedge with screws, it can be checked at what level the joint canal.

tls-Ss

» The holder joint has the options of 1 mm and 2 mm joint widths.
» It can be used for coating materials with a width changing from 3 mm to 17 mm.

Mode of Use

STEP 1

STEP 2

STEP 3
If the width between the coating materials is bigger than 3 mm, tile spacer can be used depending on the width.

STEP 4

After fixating, wait until the adhesive is dry (24 hours). Then the part that remains on the surface of the coating material should be removed by hitting to the sides of the wedge with screws using a mallet with plastic end.

STEP 5

After dismantling, the wedges should be collected to be used in later installations.
Collected wedges can be re-used 20 to 40 times depending on how the personnel work.
